

## Measuring Wardrobe & Kitchen Door Hinge Hole Positions

If you are replacing existing doors and require your new doors to have the same hinge hole positions then follow these simple steps so that your doors are drilled to your exact requirements

Measure the hinge hole positions on your old doors, measure the top two holes from the top of the door to the centre of each hole repeat for the bottom two holes but measuring from the bottom of the door.

If you have difficulty obtaining these measurements then remove the door from the hinge you will see a small mark in the centre of the hinge hole measure to this point

**Important Note:** The hanging of a door is taken from the front NOT the back therefore the door shown is right hung

If you have any doubts please call us we are here to help

**Always measure to the centre of the hinge hole.**
